PART:-A

1.

a. Environmental Studies :-

Environmental Studies is very useful in day to day life. To protect and Conservation of plant and animals living things it is very helpful to study the Environmental Studies.

It's scopes are :-

- protect plants.

To protect diversity the Environmental studies is very important.

- Conservation of Species.

To build the species the Environmental studies is very important.

- Pollution free :-

To grow such plants and animals the pollution free Area, good air, water is needed!

b. Non-renewable Resources:-

- The Non-renewable Resources which can't occur in nature it is a small quantity and we can't use more is called non-renewable resources.

Non-renewables means low quantity present on the Earth.

for Example:- petroleum, diesel, coal.

- In the today's life usage of cars, goods services is more to move goods services car, bike the petrol is needed but it is a very low quantity present on the Earth. it is high cost.
- In the today's life diesel is also very important to transport system but the diesel is low quantity present in the Earth.
- So use bicycle and walk and use public transport.

d) The two characteristics of grassland Ecosystem.

- In the grass land Ecosystem. the plants and living Organisms doesnot harm.
- In the grassland Ecosystem the Ecosystem dependin ~~g~~ upon on the other species, Genetic and primary Consumer Secondary consumer and Tertiary Consumers.
- In Grassland Ecosystem the animals and plants are grown orderly and protecting the grass land by producers, primary consumers, secondary consumers and Tertiary Consumers.
- Grassland will also play an important role in the Ecosystem. because balancing an a Ecosystem is very much usefull in day to day life. by by Grassland is also an important Ecosystem because Grass ~~to~~ Herbivores will eat grass cow and deer and Herbivores will eat grass and ~~Carn~~ Carnivores will eat Herbivores and Omnivores will eat both Herbivores & Carnivores.

PART: "B"

5. The Causes and Effects of Urban Solid Waste:-

- The Urban waste causes many harmful materials like solid waste it harms the people and turns an ecosystem unbalance. In the urban people using many materials like plastic usage and harmful solid particles usage very much in the day to day life.

people getting unhealth and the harmful material usage cause more bacterial infection and using plastic bags, bottles plastic and by getting this the pollution will grow up more and for these water pollution air pollution and noise pollution was happens.

By doing this solid waste throwing here and there the people suffering a lot and unhealthly and polluting. drinking polluting water can also cause the unhealthly and get suffering from several diseases like Asthma, vomiting, Cancer.

Causes:- of using Urban Solid waste.

- Using of not decomposing waste also Causes the solid pollution and deadly health diseases.
 - Don't use plastic materials using of plastic materials can also cause the pollution.
 - Putting of wastage here and there can also cause heavy pollutions.
 - The three Effects of Urban solid waste
 - Using of plastic and solid material causes very much pollution and unhealthy Environment.
 - Use a pollution free products like jute bags instead of usual plastic bags.
 - Don't use plastic and don't use more petrol diesel.
-

6) The three ethical values associated with biodiversity.

- The ethical values are the usage of plastic bags.
- Awareness of pollution and environmental studies people knowing the awareness of the pollution can also be helpful in the avoiding the pollutions. and Maintaining good healthy life.
- Protecting forest:
Don't harming the forest and don't cutting the trees and In India worshipping gods As a trees, snakes, flowers like lotus flowering and plantation is also use in making pollution free and good healthy environment.
- Deforestations.
The value of tree and snakes and lotus is worshipping of god and protecting the plants and tree is also a ethical values associated with biodiversity.

7. The impact does pollution on aquatic life :-

Water pollution is having a impact on aquatic life. using pollution and making water harmful causes the aquatic life dies. aquatic life means fish, crocodiles, tortoises, etc.

- This are the aquatic life and by harming water pollution. water get polluted by drinking aquatic animals will die as faster. by polluting water the animals will die this is the main causes of water polluting. and harming the aquatic animals.

- The main impact is using plastic bags and polluting air and by air polluting the water will also polluting and waste and harmful material throwing in the water can also getting water pollution by consuming that the fish and crocodiles and all aquatic life get unhealthy it will dies.

Part C

8. The role of an individual co. in the Conservation of natural resources:-

- Natural resources Means it is obtained by the nature which does not replenished. is called Natural Resources.
- Natural Resources Means Solar energy, wind energy and Geothermal Energy and hydro Electrical Energy this all are the Natural Resources.
- The Solar Energy :-
The using of sun we can obtain the Solar Energy and by obtaining Solar energy we can use Solar cookers, Solar water heater, Solar panels are very useful in making and obtaining the Sun the vitamin "D" we also obtaining and making us a healthy and sun can make many pollution and sun will also helpful in the photosynthesis.

Wind Energy :-

- Wind Energy is very much important in a day to day life. In today's Generation the air is very important like Oxygen, Nitrogen Carbon dioxide is very important in day to day life.
- Wind energy is helpful in Electrical Fans, bulbs and using the air and other materials. It is very important.

Hydrothermal Energy

Hydrothermal Energy is also a natural resource by this energy the water falling down is called Hydrothermal Energy.

By Hydrothermal Energy many electrical applications have come into use. The hydrothermal energy is very important in the day to day life and people will learn the and protect the waters like Rivers, ponds and oceans.

Geothermal Energy:

- By industrial Air the Geothermal Energy will be obtained and the Geothermal Energy will also be very important in day to day life of living Organisms.

11. The Causes, Effect and Control Measures of water pollution.

• Water pollution Causes

- By putting waste materials in the water, water will get polluted and harms water living and aquatic life.
- Water pollution will affect more to aquatic life and as well as the living beings also it affects the living beings by unhealthily and causing many diseases like dengue and other diseases.
- Water pollution will affect full of the world because the Earth contains the

75% of water. So first we have to protect and safely we have to consume it.

By putting garbage waste it will pollute many aquatic life and harmful diseases will cause and aquatic and fresh water is very healthy for aquatic life as well as us living things.

In main efforts is that by polluting water applied to the agriculture field will effect the plants and diseases will cause and making suffer in agriculture field by eating a crops and vegetables if it is made of fresh water it will be better if it is made up dirty water polluted water it will harm the life of living things and many more by water causes by the putting dirty particles and harmful particles and deforestation will also take part in that and the water will be polluted by the air pollution by burning the harmful materials like plastic bottles and plastic materials. it will pollute the air and that dust particles come and put in that.

that water and water will get polluted.

- By consuming or drinking polluted water the aquatic life like fish, crocodiles, toads will die and living beings and living things will also get suffering from these diseases like dengue, cold and many other diseases.

∴ Control Measure of water pollution.

- Don't using of polluted things like plastic and harmful materials.
- purifying the water and heating water before drink
- Making wastage put in the garbage drum.
- People awareness :- people must awareness of the polluting waters.
- Deforestation :- Don't cut the too much of trees and plants.
- Water should be clean so people don't harm them by public awareness about the water and Social Service and Environmental studies knowledge about the

Environment.

9. The In-situ and Ex-situ Methods of biodiversity.

In-situ :-

In situ Means protecting the animals plants and birds and putting them into a zoo's and Sanctuaries is called In-situ.

In-situ is very much useful see the animals birds different animals and birds will we will see in the zoo's areas.

people will get known about the different types of animals birds and living Organisms.

It will more helpful to Understand the types of animals and birds present in the Earth.

Then In-situ in Our India animals we see and protect and Maintains a good health and feeding them and protecting them from a wild animals. and protecting and feeding food to them.

In-situ Methods.

- In situ protecting them by putting them in
Zoo's animal protecting Centres.
- Animal and birds Sanatoriums.

For Example :- Deer is protecting from a wild
animals and by putting them in a
zoo's it will be more happier and people
will also see them and feed them.
and like that protecting animals and
birds by Methods like zoo's animal
protecting Centre.

Ex-Situ:-

Ex-Situ means protecting animals in Our
India and taking other countries animals
and protecting them in a protecting
Manner Centre called Zoo's animal
Centre research Centre

Ex-Situ is very much useful in the day to
day life Ex-Situ is also an Method
to conserve as a beautiful and different

Types of Animals :-

Ex-Situ Animals Methods It is very much useful in a day to day life people will see them. and the ~~as~~ biodiversity will also increase and by species obtaining is more and

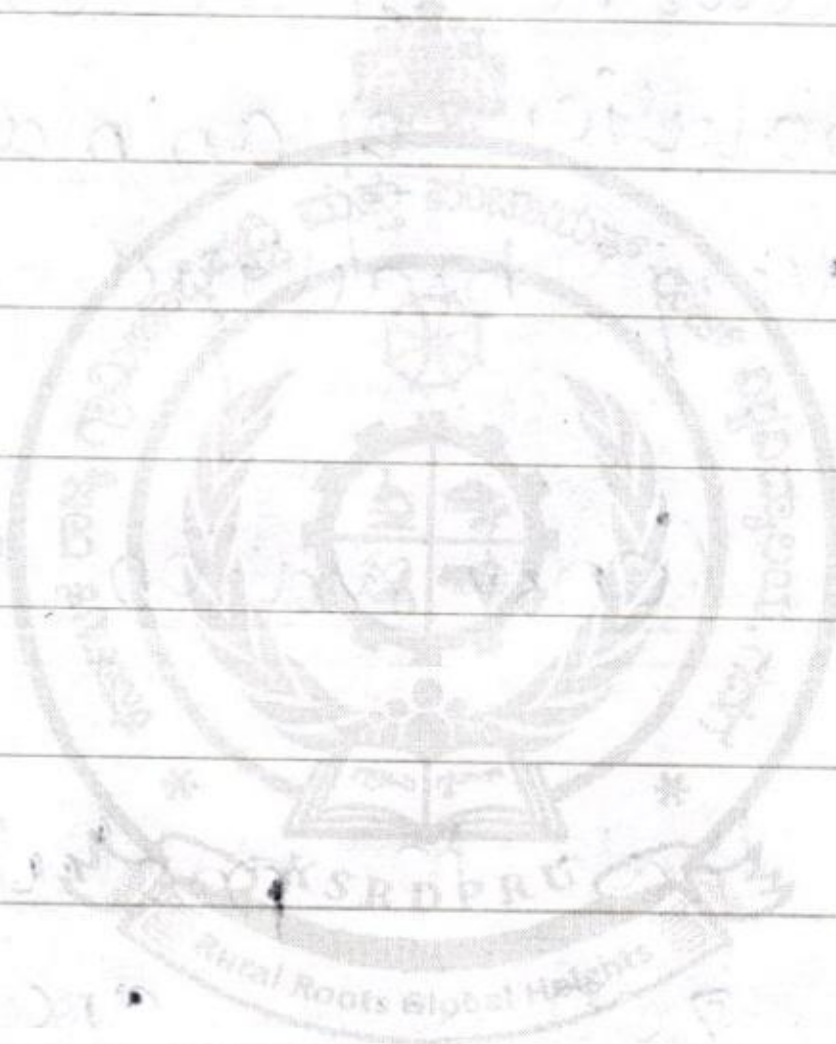

In biodiversity the animals grow more and more and improves the biodiversity and people will aware of the animals and birds. and the protection of animal and birds is also a very beautiful Method.

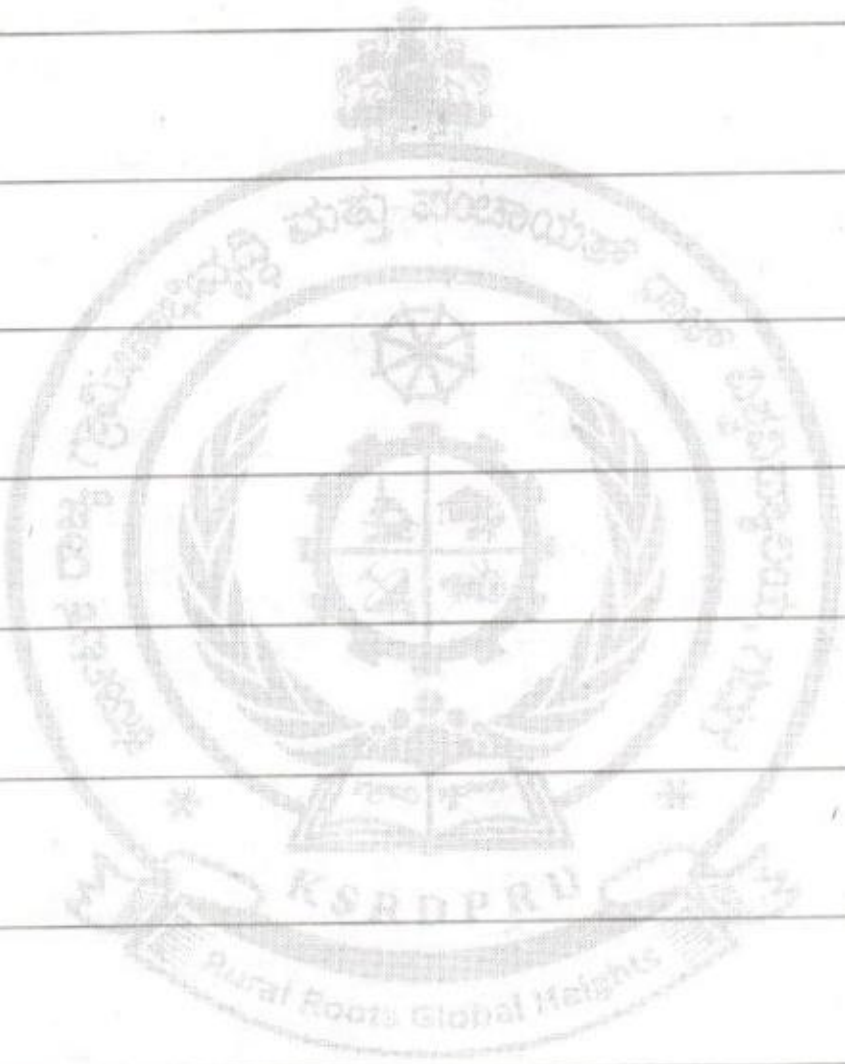

Methods of Conservation of Ex-Situ.

- The Method is that to protecting a animal and birds into zoo's and protecting centres
- The wild animals will put in zoo's and people will see them in Next generation also.

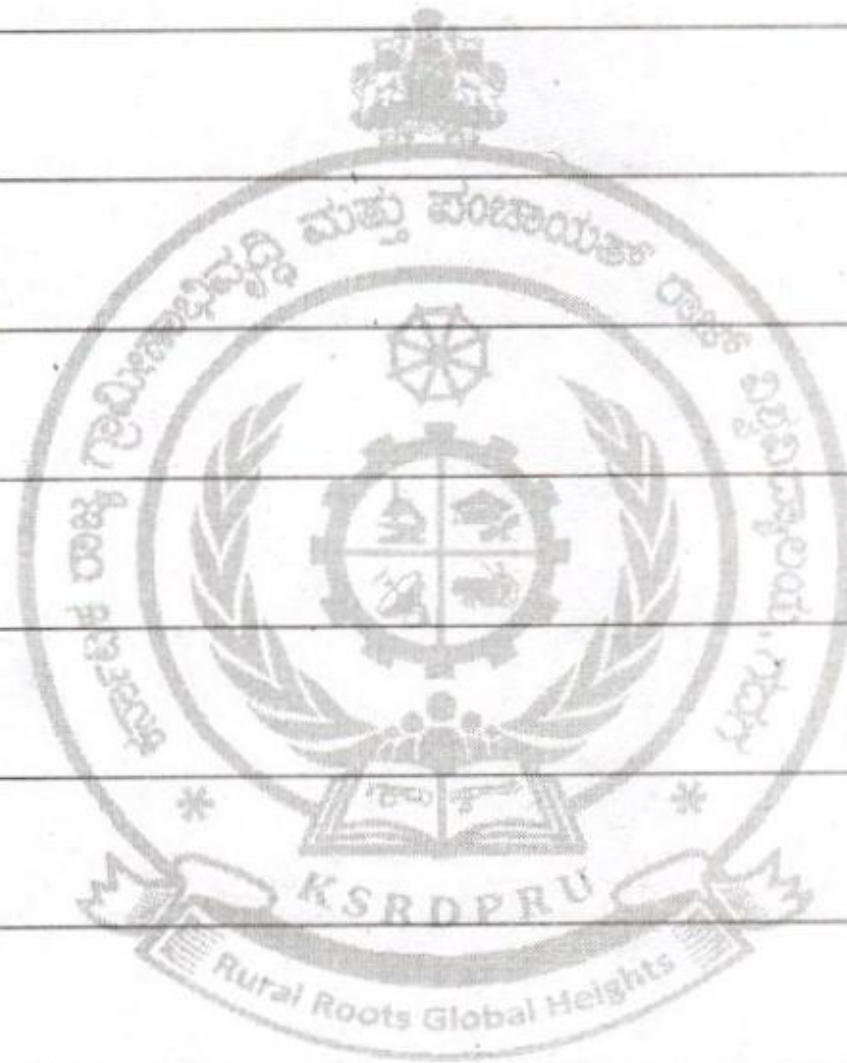

for Example :- In Ex-situ putting a animals into zoo's areas it will be protected and In Next Generation people will also see them. like putting different type of rabbit in the zoo's areas people will visit and see them.
