

INSTRUCTIONS TO CANDIDATES

1. **IMPORTANT** : CANDIDATES TO NOTE THAT ADDITIONAL SHEETS WILL NOT BE SUPPLIED AND CANDIDATES TO WRITE THEIR ANSWERS JUDICIOUSLY. CANDIDATES TO WRITE THEIR REGISTRATION NUMBER IN SPECIFIED SPACE ON FRONT PAGE ONLY. WRITING NUMBER OR NAME IN ANY OTHER PART OR MAKING SPECIFIC MARKS IS TREATED AS DELIBERATE ATTEMPT TO INFLUENCE EXAMINER AND WILL BE DEALT SERIOUSLY AS PER UNIVERSITY RULES(MALPRACTICE IN EXAMINATION).
2. Write on both sides. Do not write in the margin space.
3. Enter all details with Registration No., Programme, Semester etc. in the front page and do not write anything in any other space. Registration No. should be written legibly and shade the Corresponding circle in the OMR clearly with black/blue ball pen.
4. Candidates are required to put their signature and left hand thumb impression in the specified places.
5. No sheet shall be torn of from the answer-book provided, if any page is spoiled/damaged, put a line across it.
6. Do not leave any blank page between your answers. Answers written beyond blank pages may not be assessed, if by accident a page is left blank write on it "P.T.O" in bold letters.
7. At the end of the examination, answer-book whether written or blank, must be handed over to the Room Superintendent.
8. Nothing shall be written on the question paper or the blotting paper.
9. See that the answer-book supplied to you bear the signature of the Room Superintendent and date.
10. Write the question numbers (specifying the sub question, if any) in the margin and leave sufficient space after completion of answer to each question.
11. Exchange of writing materials, Communicating with other students, is strictly prohibited.
12. You will not be permitted to leave the examination hall until half an hour after the question papers are distributed.
13. During the last thirty minutes, you will not be allowed to leave the hall.
14. A Candidate is liable to be expelled from the examination hall and his/her case will be reported to the Registrar / Concerned officer of the University, if he / she
 - (i) Brings any book, notes, mobiles any electronic instruments etc., into the examination hall,
 - (ii) Speaks to or communicates in any other way with any other candidate while the examination is going on,
 - (iii) Or takes with him/her any answer-book written or blank or Question Papers, while leaving the examination hall during examination,
 - (iv) If found giving or receiving assistance, or copying from any paper book or notes or allowing any other candidates to copy from his/her answer book etc.
 - (v) Writes either on blotting paper or any other paper clues or points which might possibly be of help to any other candidates during the examination,
 - (vi) Uses or attempts to use in any other unfair means like smuggling in any other answer-book written outside or found guilty of impersonation,
 - (vii) Discloses his/her identity or makes peculiar marks in his/her answer-book,
 - (viii) Or uses abusive or obscene language or is guilty of any other misconduct of a serious nature.
15. A warning bell will be given ten minutes before the close of the examination. At the second bell, You must stop writing and be ready to hand over answer-book to the Room Superintendent. You must not leave your seat until all answer-books are collected by the Room Superintendent.
16. Candidates are forbidden to smoke or to take tea, coffee etc. In the Examination Hall, Drinking water will be supplied at the seat itself, if necessary.
17. Candidates who are not in their seats by the time notified, will not be admitted to the examination. The Chief Superintendent may however, at his discretion admit those who give him a satisfactory reason for the delay not exceeding 30 minutes after the commencement of examination.
18. A candidate who disobeys any instructions issued by the Chief Superintendent or Room Superintendent, or who is guilty of rude or disobedient behavior, is liable to be instantly expelled.
19. Use either blue or black ink pen or ballpoint pen. Do not change the color of ink in any condition. In case you are compelled to change the color do not forget to take the signature of Room Superintendent explaining him/her the situation.

C. The two physical methods of Sterilization are

* Autoclave Method

* Radiation Method

*

F. One example of antigen-antibody reaction

* antigen $\rightarrow$ Ex: It is a foreign body which infects the

* antibody $\rightarrow$ Ex: It is a dose which protect from the antigen body infection.

g. The two control measure for hookworm infection are

* We should take pre location or wearing
slippers in the duty areas

* we should make a good active to
avoid it.

Part-B.

(HA) The life cycle of the malaria parasite & discuss preventive & control strategies are

Introduction: The malaria life cycle is a producing eggs in the standing water or drainage where there is dirty place. and we should keep surrounding clean and make where water is standing for long time we should close the pit from mud there we can protect from malaria.

* The life cycle of the malaria is producing a eggs where there is a drainage or standing water for long time it will lay the eggs and move. *

* then when the eggs were broken then from the eggs mosquito will be getting more. it is like one mosquito will lay 10 to 15 eggs and move to some where from that 10 to 15 eggs again mosquito will be produced & get

= produce more mosquito and lay eggs.

* The mosquito only sucks the blood & they will be growth the family of mosquito by every day by day the mosquitoes suck the blood & lay the eggs.

* The preventive & control strategies At first we should keep our surrounding clean and our home clean than there is a lack of chance to come mosquito and lay eggs.

* We should keep the municipal dustbin changing everyday becz most of the mosquito are laying eggs & getting more mosquito from the dustbin.

* Again we should clean our home & our side door at least monthly - once becz it is less chance to mosquito arrives to our home.

- * There were we saw the standing water from the long time we should move the water from there or we should close the pit of water from some stones and mud.
- * We should take some pre-caution when we are going outside the home then we should wear full sleeves clothes & apply eodanin to the body then we can protect from malaria.
- * Then when we are sleeping we should make to tie mosquito net when we are sleeping at night & make some liquid coil on then the mosquito can't effect to body.

Conclusion - There are some pre-caution how to avoid the malaria & how to ~~destr~~ prevent by home we should keep surrounding clean & hygienic & we should always make some cleanliness in the society.

Q. A About autoclave & its uses.

The autoclave are mainly classified into 2 types.

~~* Thermal autoclave~~

* Physical autoclave

* Chemical autoclave.

Introduction :- The autoclave are used in many way for example Hospital, Factory, Scientist lab etc. becz to prevent from the bacteria & sensitive organs. Which are harmful to our body. So for this reason we use autoclave.

⇒ In the physical autoclave some method are :-
 * Physical method autoclave at 10 to 15° temperature to prevent from the bacteria and Radiation where it is used to make body relaxation in some hospital.

* The autoclave main uses in hospital becz of the bacteria & sensitive virus which are present in the floor or any equipment.

So ~~here~~ they are making autoclave work at the degree of 10 to 15° Celsius method.

* Some times it used in the lab also when there is an virus is spread or any virus is getting to body by the equipment then it is used.

* In chemical method. There are some liquid former like formulian & Alcho Alcohol Method form. it work of the prevention of some particular lab equipment & are long time body store.

* The chemical method of autoclave is in the Anatomy lab they are protecting some of the long body parts like kidney, heart or the full death body in that conduction there is used using chemical method of formulian.

* The chemical method autoclave is very useful to prevent some ancient body like Egyptian body or mummy because they believe that they are gods. So when it is buried for a long time it may get chance to decay & infected but when we use formaline it will prevent the body from infection and decay.

* USES

- * The physical autoclave is used for the hospital where it is used mainly in OT room (Operation Theater) because when there is an infection present in the equipment it may cause infection to the body while patient is working from that instrument.
- * It is also used in laboratory & factories to destroy the infection & small particles of virus.
- * It will be safe of the using autoclave because it doesn't harm to any patient body and any child at the hospital.
- * It is in a very pure form & killed by small particles for the infected things.

CONCLUSION :- Many know that the autoclave is a imp thing in every industrial form & medical be to protect from the infected thing & small & large infected things.

②A morphological changes in reversible & irreversible cell injury.

Introduction :- When the cell injury has got there are many source to imbalance the part which is got injury by cell & show it reversible & irreversible in the particular place.

* The reversible & irreversible cell injury which can't be form in the good manner at the before per the cell injury has got it will be in reversible movement of the cell and it will flow easily but after the injury the irreversible cell can't move on proper method bez it has changed more cells of living organism.

* The cell injury will be irreversible in the particular part which damaged but be at the part can't get more cell present & it can't be fine at the movement when it was flow in vander-met method.

* But before the cell injury the reversible of the cell is in a good form it will reversible flow to the every part & maintain the balance of the cell injury. it will be the good transmission & good flow through the blood circulation & it will be protect the cell injuries.

* After the cell injury damaged it a irreversible cell injury be the cell will flow in the normal method but it will can't get perfect movement or the perfect shape were cell injury be that is a dead cells present so in that place it takes more time to flow in a good method & it will clear all dead cell injury and make every cell active.

* When morphological changes is a standard but when it get irreversible cell injury the cell will not protect how it is protecting from first time.

+ When the cell injury is lot damage there is some particular treatment to get again cell active in that place and make the cell injury place active and keep the place strong.

* The method of treatment of irreversible cell injury we should make proper treatment and get proper nutrition & proper activity to the injury place than the dead injury cells will get active and it will start the work and then in that place good cell will be formed.

Conclusion: When the cell injury is reversible & irreversible then we should now that take proper treatment & activity, proper nutrition than the place cell injury has got to will get active & make good sense.

Part - C

(IIA) Inflammation is a protecting & growth & taking care of cell injuries and to ~~to~~ protect the cell.

Introduction: Inflammation is a part of the body which used to protect of cell injuries & make cells active in the body and it will protect - ed by every cell injuries.

* Inflammation which protect to every cell injury in the body & make the cell injury in correct form and keep body protecting from the cell injury and make a good sign to the cell injury.

* Inflammation ~~can~~ may be known or unknown absent in the body than the cell injury will get more and more damage & body get bad conduction bez the body is almost consist of group of cell make it tissue when cell injury got damage in lot frame than tissue can't make it proper work to the body support so inflammation

is a constant in a helpful manner.

* The inflammation can also make cell injury in proper form that can help full to the human body or any living organism but if inflammation is absent then body will not in good posture it may destroy every part of the body. So the inflammation is more important to living organism.

⇒ Discuss its causes,

* When the any part of the living organism is got damaged by accidentally then will be a death or cell injury.

* When the cell injury is got death but that part or place got swelling, redness and the cell will not able to move on.

* It may cause from the many thing not only by accident, it may cause - by any harmful metal heated or any strong substance poison or the living organism in that time

- The cell injury is caused.

* Signs

* The signs when the inflammation of a cell is got injury in any particular place of the living organisms. It may get chance of swelling, redness, or infection and get some water flow in the infection place.

* It can be prevented by the hospital method make the clear of the part swelling & take the precaution of the particular place which is harmful to cell injury.

* When ~~the~~ which part is got cell injury by some any object that part can't work or active in a good manner because the sign like it is harmful to lot damage a cell injury in that part so the blood flow is also can't make the work proper in that particular part & cell damage got not moveable with blood.

Types

- * Swelling
 - * Redness
 - * Water store in the cell injury.
- * When it shows the swelling we should not that there is got cell injury & we should take treatment of it as soon as possible be we neglect it can harm more & it can be.
- * After Redness it may get lot of pain be the cell injury got more damage in the particular place it may can't active the work so we should make the better treatment for it.
- * But when the water store in the infected cell injury then all of the tissue is got damage & there is no any active sensors in the place where water is stored so for that we should make & take the water out of the cell injury & then when good medical support then the cell will get strong activity.

* Mechanism of Inflammation

* When the inflammation is more active than any cell injury occurs it will cure in the short time & it can't take more time. In that movement inflammation is more active.

* When the inflammation is more active bcz it has got correct & good nutrition to the body and proper work & activities by that the inflammation is works more effectively & make the cell injuries in good cell & activates cell in the short time of the period.

Conclusion :- The inflammation is a imp thing in living organism bcz it has may thing to control or cell injury in the body and it well protect cell injury by any substance when the inflammation is a more active than there is lack of change of cell injury in the living organism bcz it protect more when it is got more active nutrition it.

Q12) Pathogenesis

- * Pathogenesis is a disease which is a state already entered to the body and it shows its sign & symptoms to the person who has got the disease.
- * Pathogenesis is mainly occurs like the people and less nutrition & immunity the disease cause or any animal bite like dog, rat the disease has got spread to body as fast blood flow.
- * Pathogenesis phase has the occurrence of less immunity, nutrition lack, and less activity the pathogenesis of disease cause easily. And it will start the work inside the body at first it shows sign & symptoms and it will make illness to the person who is got the disease and he will be lost in proper conscious mind.

* Clinical features

- * The person who is suffering from the particular disease he should take a proper clinical features treatment so he can get cure in early stages.
- * When the person got the sign & symptoms of the disease he should move out to clinical features & get letters to the doctors medical prescription and follow the prescription which is given by the doctors order then it can cure in the particular given time.
- * When the person move to the last stage and go to the clinical there he can't be a good health condition because the disease fully spread to the body & he can infect to the other people that the position of the last stage of the person who is infected to the disease.

* laboratory diagnosis

- * The person who cause by the diseases he can be referred to doctors and they give proper treatment who is suffering from disease but the medicine which were not get cured then doctors refer to laboratory diagnosis.
- * But they can identify how much the disease spread to the body and which table we should refer him in the laboratory report they can easily find the disease spread through body.
- * When the laboratory report finally shows that a disease is present in the his body or not or the disease is getting infected to other organs to the laboratory are important in identifying the disease and giving the proper report & then doctors can also get the proper disease to cure the patient by the medicine.

* Preventions of rabies

* There are several steps to prevent the rabies from the human body the animals.

* First we should take anti body for our safety when there is a bit of dog, becz the rabies we formed by the dog, rat, lot. So we should take antibody dose & make the place where the dog bit clean with it soap & water.

* After the dog bite we should take some dose there are particular day 3, 7, 12, 14, 21 day course of dose for prevention of the disease. So when we take the doses for 21 days then we can be prevented by rabies.

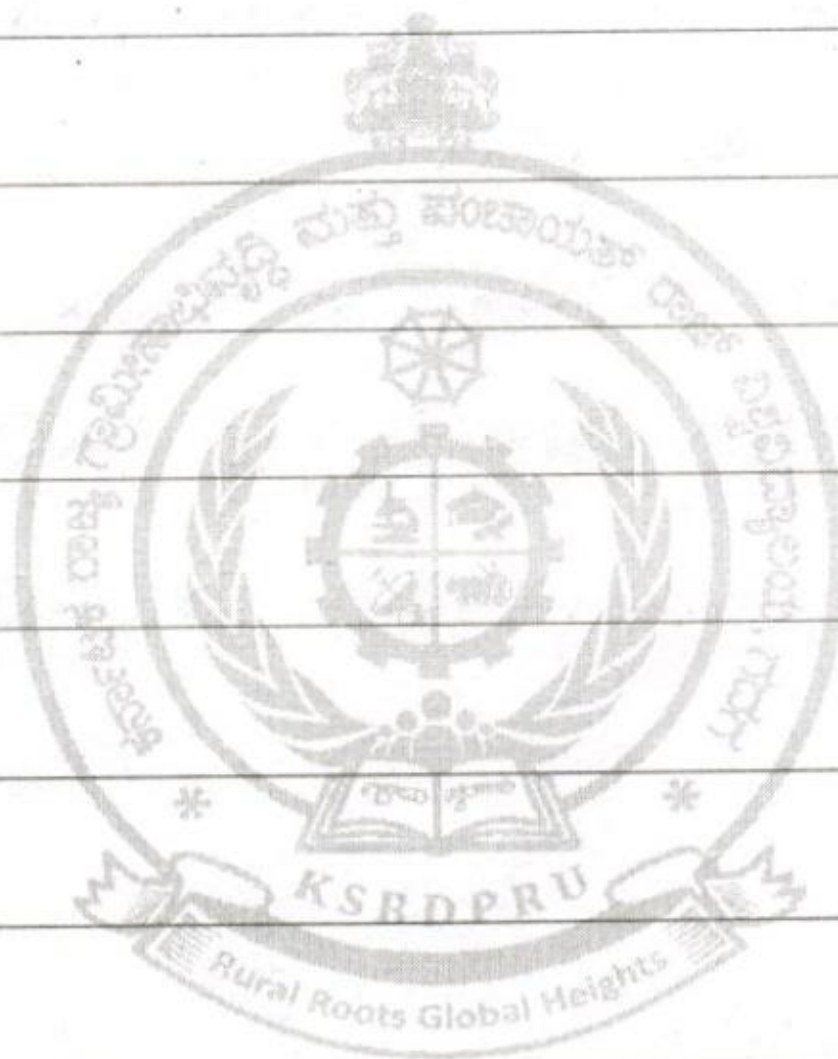

* Then we should know that the dog is in a good condition or bad becz some dogs are vaccinated so there is no problem some of the dogs didn't get

vaccinated so that it will get disease transmission to our body.

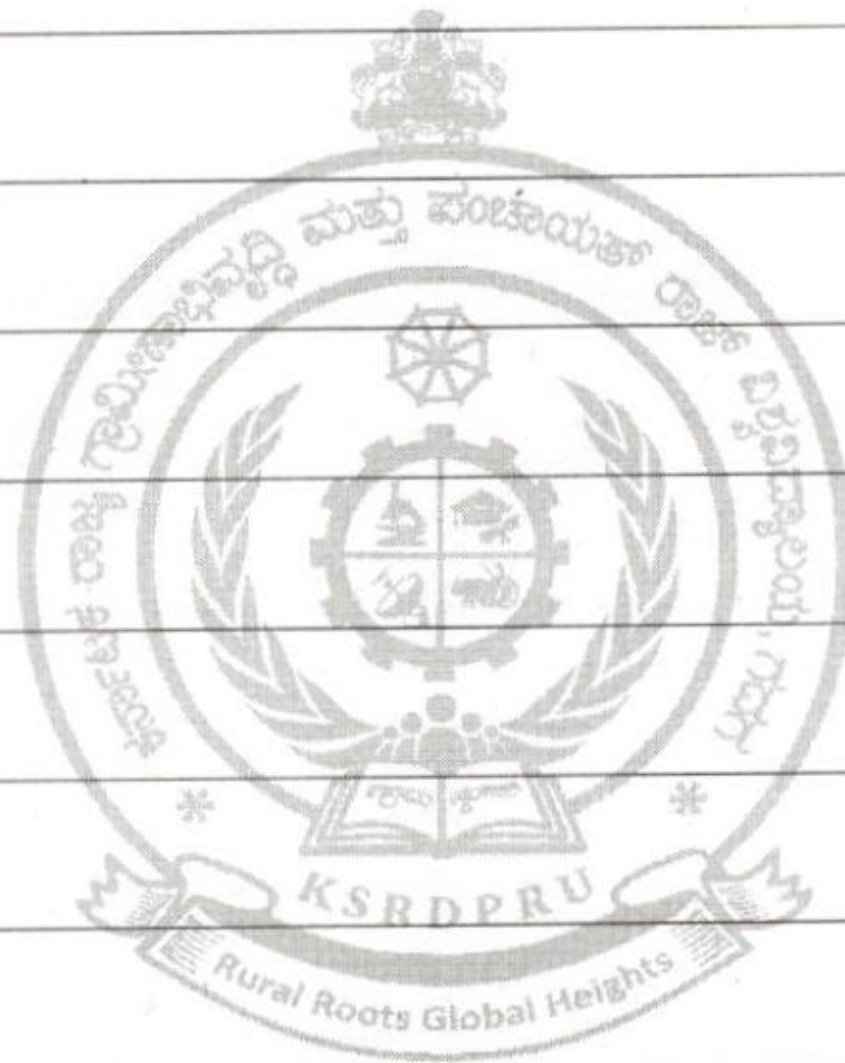

* The prevention we should take that first we should make every animal vaccinated and again we should also take vaccinated to our bodies so we can prevent the rabies from every animal.

* When the vaccination is got by every animal and if they have bite to human there is a less chance of rabies virus spread to the body and the person who is got disease he can also cure in short time.

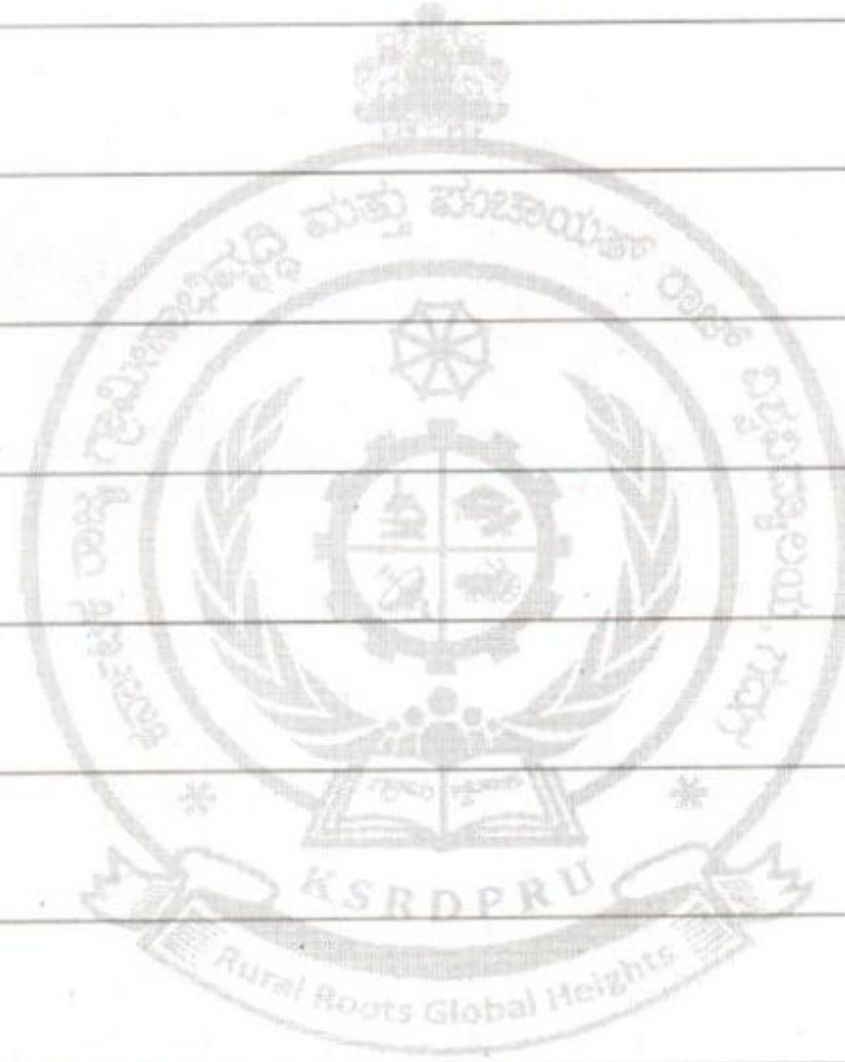

CONCLUSION: The step we should take when any disease is spread to human first we should take the clinical features after laboratory diagnosis after that we can know that the disease is getting cure by the all of these steps.
