c) disability indicators are:

- * Sickness.
- * Illness.
- * risk factors
- * causation.
- * horizontal tissue and signs and symptoms.

d) risk factor is an disease outbreak in the specified population in the given period of time is known as risk factor.

Ex:- disease outbreak in the specified population/area
:- spread rapidly

f) Incidence and prevalence are under the morbidity rate

* Incidence is the death in the given period of the Incidence morbidity rate is called ^{Incidence} ~~pre~~

prevalence is in the period of morbidity, deaths and prevent the given period of time is called as the prevalence.

g) Endemic, Epidemic and pandemic disease.

* Endemic : is the number of cases in the given period of time.

* Epidemic : Sudden increase in the number of cases in given specified area.

* pandemic : is the cases are outbreak in the given population and risk factors in the specified area is known as the pandemic disease.

PART - B .

9] The Epidemiological triad.

* That having three factor.

* Their are Agent, Host and environment .

* The epidemiological triad is depends on the environmental factors.

* epidemiological triad is one of the major factor in the epidemiology .

* The epidemiolog is help to the measures the birth rate and death rate to the epidemiologist .

* and it is very helpful to the epidemiologists

- * In the epidemiological triad the Agent is disease.
- * and in the triad. Host is a man or disease causation.
- * environment is the major to the Agent and host
- * The agent is disease causing on the host;
- * and Host is depending on the environmental climates.
- * environmental climate is produce the diseases, through environmental factors.
- * diseases are born on the changes in the climate.
- * Hosts are disease acceptors. why because the diseases are attack on the Hosts. because weak. because climatic changes.

- * Hosts are not having good immunity power that's why they are suddenly accepts the diseases.
- * Hosts are changes through the environmental climates.
- * and the host ~~are~~ are suffering from the diseases, to sickness, illness, and disability.
- * Ex: environmental hazards
- * risk factors.
- * outbreaks.
- * epidemiological triad is also help to prevent the risk factor or outbreaks.
- * and the disabilities in the specified population.
- * and help to epidemiologists.
- * they prevents and control the spreading and prevent the outbreaks.

3] The measures of mortality and their importance in the public health is.

- * mortality rate having the two factors.

- * Crude death rate.

- * Specified death rate.

- * In the specified death rate is three types.

- * early death rate.

- * cause death rate.

- * and sex death rate.

- * In sex death rate (male and female).

- * mortality: is measures death rate in the given time or period. is known as mortality rate.

- * crude death rate: is current diseases in the given period of the time.
- * specific death rate: the diseases are in the specified population of area. is known as specific death rate.
- * early death: is the disease causing in the early stage before the age. and in child death. is known early death.
- * cause death rate: A man having the disease. and ~~they~~ they are suffering from the disease and they having disability and the last stage is. crucial, death is known. cause death.
- * and sex death: it means the death are occur in the specified. sex. and. identify the male and female. deaths in the the specified population are in the area.

- * the mortality rate is the many ways.
- * and identify disease causing are,
- * and controle the disease and prevent that.
- * the mortality rates are preventing the next coming days.
- * aware about the mortality rate.
- * and educate the peoples about the mortality rate.
- * control themselves.
- * and follow the rules and regulation.
- * for preventing diseases.
- * asses the facilities for peoples peoples.

* They are suffering from the disease.

* and. Immunity power is less the viruses are attack.

* and they are accepting the diseases.

* why because They have Immune power is more important in the human body. and maintain the good health.

Q) health indicators and its uses and
IMR and MMR.

* health indicators are.

* mortality rate

* morbidity rate

* maternal mortality rate

* neonatal care

* adolescent care

* Infant care

* New birth care

* menstrual care

* elderly care

* antenatal.

* IMR - Infant mortality rate.

* MMR - Maternal mortality rate.

* $IMR = \frac{\text{no}^{\text{r}} \text{ of death in the year} \times 1000}{\text{mid year population}}$

* $MMR = \frac{\text{no}^{\text{r}} \text{ of death in the calendar year} \times 1000}{\text{mid year population}}$

* The mortality rate means the death rate in the given period of time.

* The mortality rate is on the early deaths are occurs.

* and it is having disease in the early stage.

* and the mortality rate can control the coming rays.

* and it prevents the cases.

* maintaining good hygiene and good environmental surroundings.

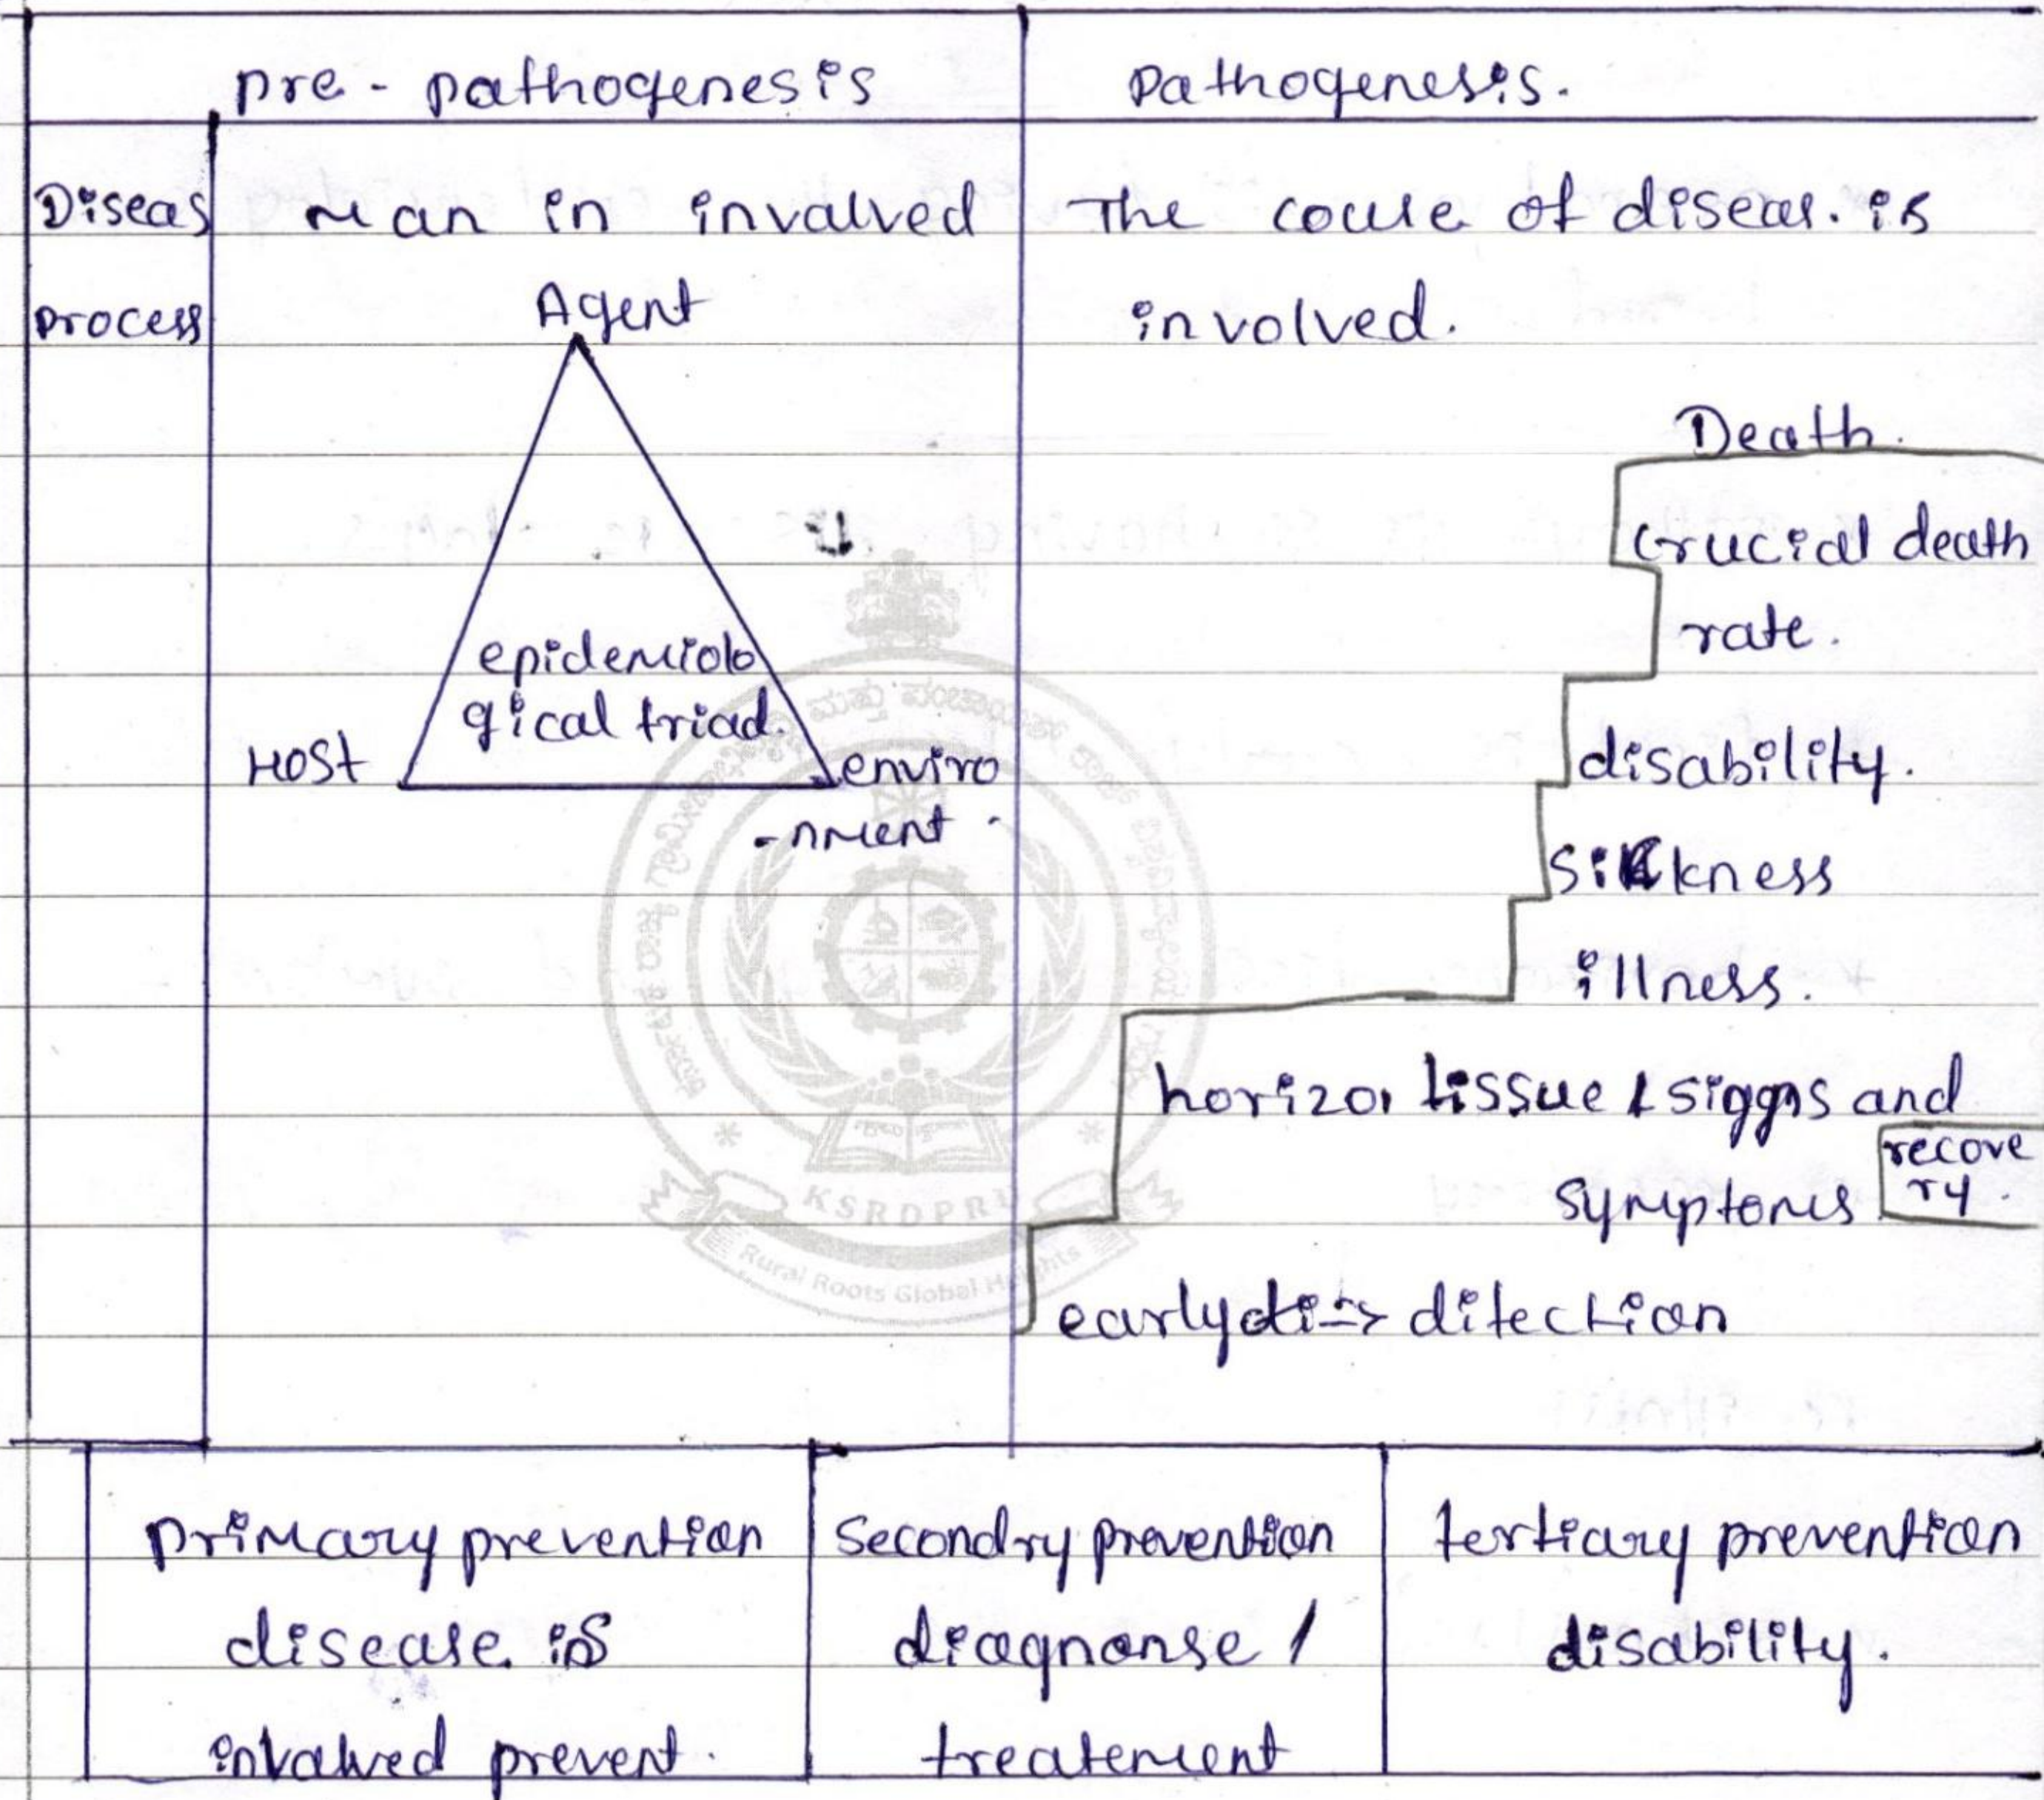

- * Morbidity rate means, death in the before delivery and in the period of given time.

12] The natural history of disease and levels of prevention.

+

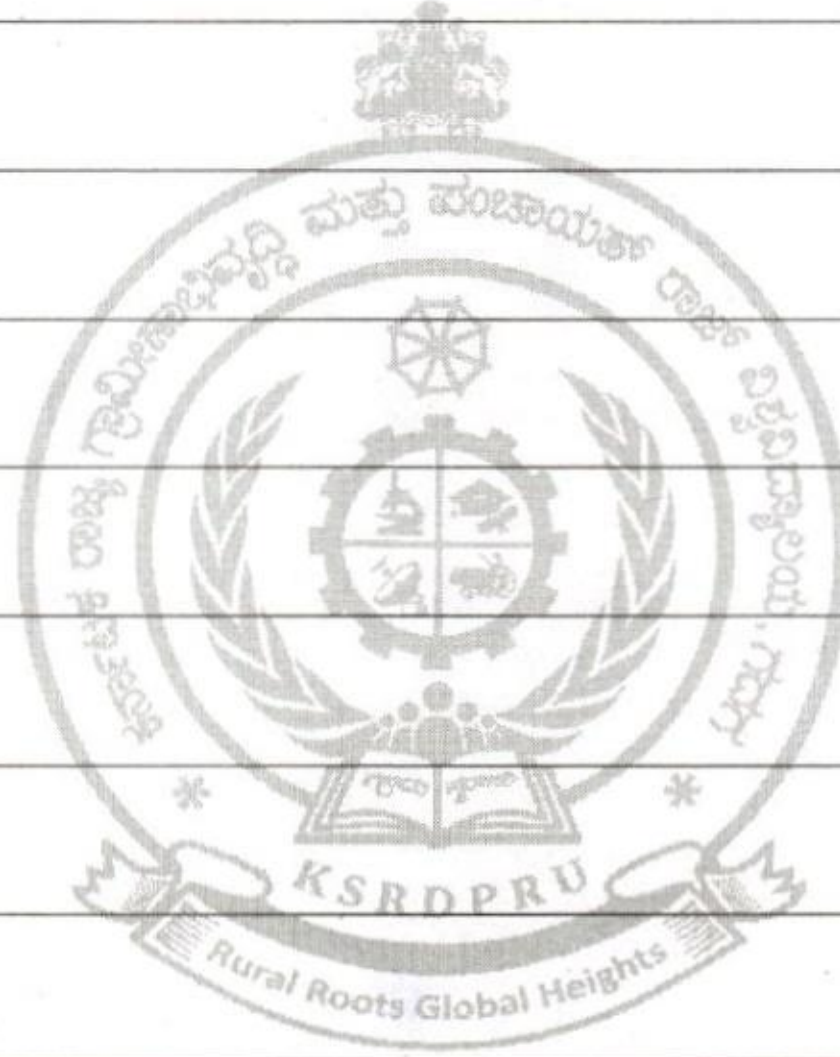

- * There are three types of prevention
- * primary. prevention
- * secondary prevention
- * tertiary. prevention.

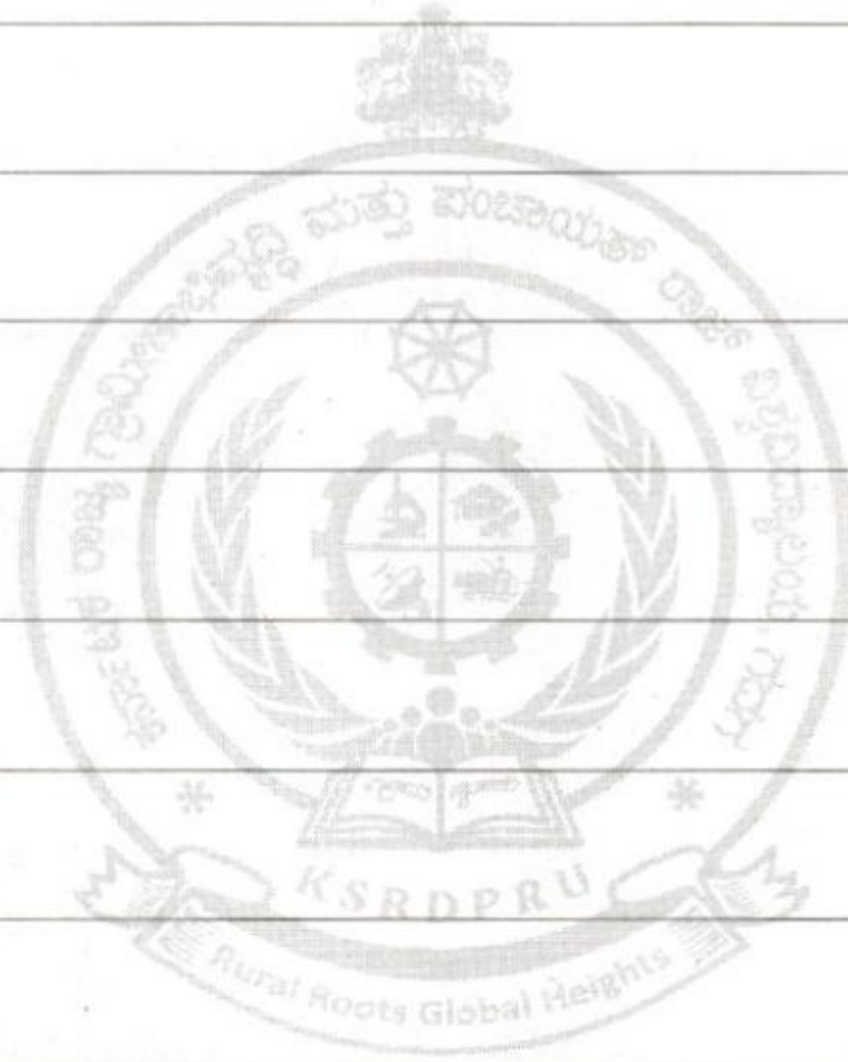

- * pre pathogenesis : is the man involved
- * pathogenesis : the disease is cause and man involved.
- * prepathogenesis having the epidemiological triad.
- * pathogenesis is having disease stages.
- * first is early detection.
- * horizonal tissue and signs and symptoms.
- * recovery.
- * illness.
- * sickness.
- * disability.
- * crucial death rate
- * and last state death

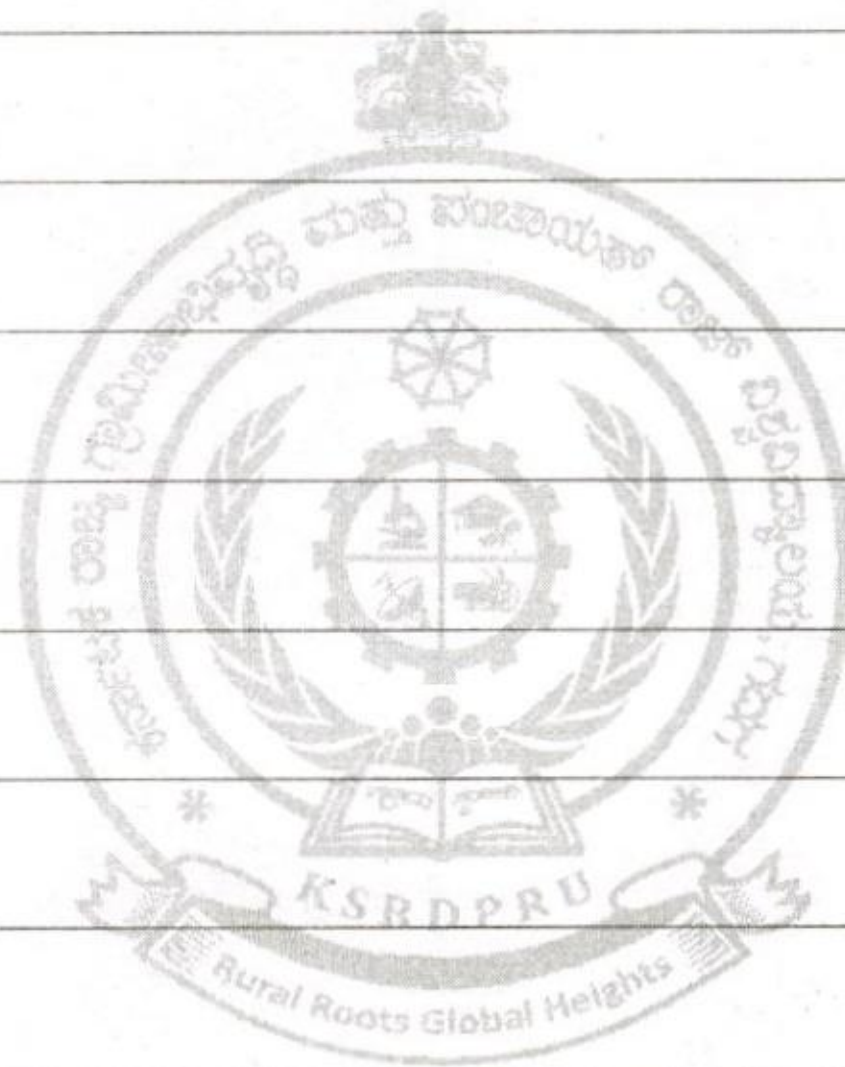

- * The natural history of diseases, according epidemiological triad in the epidemiology.
- * The disease prevention is major role in the public health.
- * and epidemiological triad is help to identify the specific death rate.
- * and disease prevention is necessary to the up coming days.
